Subject: attention: ASSOCIATED PRESSRe: Blue Ribbon Commission on
America's Nuclear Future Draft Report to the Secretary of Energy
Tim:

I dont need to "try again" the link.

I have studied your 81 pages right away when you have published it on www.brc.gov

But I tell you what you should try:

Switch in your brain, forget your arrogance and ignorance and work as patient

- since Nov 2, 2008 - hundred of hours on my risk - on this great idea :

[I ask you for one hour of your full attention for this press information](#)

Publiziert 19. Juli 2011 | published on www.schottie.de
MILLIONENJAHRESICHER , weltweit neu und technisch machbar
ist die Endlagerung jedes einzelnen radioaktiven Atoms und jedes einzelnen Atommüll-
Fasses aus Asse, Gorleben, Yucca Mountain oder sonstwo

TIEF IM ERDMAGMA.

Dear Mr. President Barack Obama:

As directed by your Memorandum
for the Secretary of Energy dated January 29, 2010
you will get soon
from the Blue Ribbon Commission on America's Nuclear Future
- www.brc.gov – this recommendation:

“The United States should proceed expeditiously to develop one or more permanent deep geological facilities for the safe disposal of high-level nuclear waste. Permanent disposal is needed under all reasonably foreseeable scenarios. Geologic disposal in a mined repository is the most promising and technically accepted option available for safely isolating high-level nuclear wastes for very long periods of time...”

... if you ignore the earthquake risk

... if you ignore the groundwater risk

... if you ignore that in case of a volcanic eruption this radioactive waste could enter biosphere.

... if you ignore the same foreseeable national and international political stress as in Gorleben and Yucca Mountain

You, Mr. President and The People of the United States should not follow BRC's SECOND BEST advise. My idea to dispose Nation's nuclear waste NOT some km deep in a "mined repository" BUT some hundred km deep in the earth magma is feasible and SAFE FOR MILLIONS OF YEARS.

Please forward this EMail / link <http://www.schottie.de/?p=2671> to all journalists you know

http://en.wikipedia.org/wiki/Continental_drift

<http://de.wikipedia.org/wiki/Kontinentaldrift>

There where you are right now the continental drift has a max speed of 10 cm/year = 100 kilometers in 1 million years.

Vice versa:

If a barrel of radioactive waste is buried 100 km deep in the earth magma it needs about 1 mio years to reach the lower side of the earth's crust.

It is not utopic to bury USA's and world's millions of barrels rad-waste 100 km deep in the earth magma.

To do this challenging job it is "only" necessary to reach the http://en.wikipedia.org/wiki/Mohorovi%C4%8Di%C4%87_discontinuity

Because a density-8-barrel rad-waste sinks under its own weight in the density-3-magma down towards geocenter like a stone in water.

There are many options where and how to reach the Moho.

Please study my about 50 EMail published by www.brc.gov click library click comments March 2010, June, July, ...Dec, Jan 2011, ...June 2011.

Please act and contact me

With best regards
Rainer Schottlaender, Dipl.-Phys.

You can find on www.brc.gov a DRAFT DISPOSAL REPORT

On page 22 : OTHER DISPOSAL CONCEPTS.

I agree with BRC's arguments in these 4 points.

I also agree that Finland's mined repository is a good solution for some ten years.

I hope some of the some hundred recipients of this Email will ask BRC, Lee Hamilton, Tim Frazier, John Kotek and Mary Woollen, Secretary Dr. Steven Chu and DOE :

Why you do not mention with one single word Schottlaender's idea/workplan to dispose Nation's nuclear waste NOT some km deep in a "mined repository" BUT some hundred km deep in the earth magma ?

Rainer,

I just tried the link in your email and was able to access the draft report. Please try again.

Thanks,

Tim

Subject: Good Morning USA.....Re: Blue Ribbon Commission on America's Nuclear Future Draft Report to the Secretary of Energy

The draft report is available at
http://brc.gov/sites/default/files/documents/brc_draft_report_29jul2011.pdf.

Not true. "This file cannot be opened"

But this does not really matter.

In this report You: The US-Taxpayer, You: Mr. President Barack Obama and You: The International Press addressed here just find 81 pages of already known informations for another 5 million dollars.

You will find nothing about the best idea/project/workplan how to dispose world's nuclear waste.

Betreff: Good Morning Timothy A. Frazier.....Re: Blue Ribbon Commission on America's Nuclear Future Draft Report to the Secretary of Energy

I have tried your link
http://brc.gov/sites/default/files/documents/brc_draft_report_29jul2011.pdf.

The page cannot be found

The page you are looking for might have been removed, had its name changed, or is temporarily unavailable.

This fits perfect to the ARROGANCE and IGNORANCE which I have experienced with you, John , Lee and BRC.

Such a great idea - and you have asked not one single QUESTION.

How stupid....
